

[3] Drawings Objection

The Examiner has objected to Applicant's drawings under 37 CFR § 1.83(a) and requested drawings to support line 3 of Claim 11, that of a fixture body having a "generally rectangular outer body". Applicant relies on the original specification, drawings, and claims to support the addition of new drawing sheets to support Claim 11 as requested by the Examiner. In establishing a disclosure, Applicant may rely not only on the specification and drawings as filed but also on the original claims if their content justifies it. As stated in MPEP § 608.01(1),

Where subject matter not shown in the drawing or described in the description is claimed in the application as filed, and such original claim itself constitutes a clear disclosure of this subject matter, then the claim should be treated on its merits, and requirement made to amend the drawing and description to show this subject matter. The claim should not be attacked either by objection or rejection because this subject matter is lacking in the drawing and description. It is the drawing and description that are defective, not the claim.

Pursuant to 37 CFR 1.83(c), MPEP 608.02, and 35 U.S.C. §

113, Applicant submits Replacement Drawing sheets 1-10, wherein replacement sheets 1-8 are identical to Applicant's original drawing sheets and new drawing sheets 9 and 10 are added which depict the rectangular lighting structure supporting line 3 of Claim 11 as requested by the Examiner.

Amend the **DRAWING SHEETS** as follows:

Replace original Drawing Sheets 1-8 with Replacement Drawing Sheets 1-8 and New Sheets 9-10.

Amend the **SPECIFICATION** as follows:

On Page 19, in Line 7, change

--- "." ---

to

--- ;

FIG. 9 illustrates a top view of an preferred exemplary embodiment of the present invention employing a lamp fixture body, generally convex in shape, having a generally rectangular outer boundary;

FIG. 10 illustrates a side view of a preferred exemplary embodiment of the present invention employing a lamp fixture body, generally convex in shape, having a generally rectangular outer boundary. ---
